

BECHRONIZED TIMING SOFTWARE OVERVIEW

1 Introduction

Our different timing software suites allow you to manage and process the collected race data in active and motorized sports at your convenience. Printing the overall ranking of a race or by category, adjusting the lay-out of the printouts, displaying the results on an extra screen or LED scoreboard, uploading the results to the internet all belong to the possibility among many other functions.

You would like to use your own timing software? No problem! We give the communication protocol of our decoders freely so that you can integrate your own timing software into our decoders.

2 Chronos Timing Software

Chronos is our in-house developed multi-sports timing software which allows you to manage and process the collected race data in many types of sports like road cycling, mountain bike, running, triathlon, horse racing, MX (motocross), motorcycle and car racing.

Chronos is an *all-in-one* timing software suite which means that *all functionalities are standard available* within the suite. Following functionalities are available among many others:

- Create an event and a participant list
- Create practice and race heat sessions with predefined or adjusted timing and sport regulation parameters
- Follow the race on your computer screen and display it on an extra LCD screen or LED scoreboard
- Print the race results and upload them to our website or your own website
- Master-slave configuration with 2 computers
- Lap times, split times, pit entry, pit out,...
- TV incrustation

3 Vola Timing Software

BeChronized makes also use of the Vola timing software suites. Vola Timing is one of our partners specialized in timing and has developed its own timing software for ski races, equestrian sports, motor sports (kart, car, motorbike), mountain bike and many others such as mass competitions, rowing and so on.

Following timing software suites can be offered: Msports-Pro (Multisports in line), Circuit-Pro (Motorized Sports on circuit), SkiAlp-Pro (Alpine Skiing), SkiNordic-Pro (Nordic Skiing) and SkiSnow-Pro (Snowboard and Freestyle Skiing).

All timing software suites allows the management, processing and printing of many types of sport competitions. Additional applications like *Display* and *Live* respectively allows you to broadcast in live an event ranking on a video network and to broadcast in live a start list, live ranking of an event on your website.

4 BMX & Inline Skating Timing Software

Next to our in-house developed Chronos timing software, we also developed a BMX and Inline Skating timing software which respectively specifically responds to the need and regulations to the BMX and Inline Skating sport.
